

SKILL DEVELOPMENT

Education & Skill Development

The aim of Education Services is to leverage Information and Communication Technologies (ICT) to create awareness and empower citizens on digital technology, financial management, legal rights and facilitate educational services in rural areas.

Education & Skill Development

- ▶ Skill India is an initiative of the Government of India which has been launched to empower the youth of the country with skill sets which make them more employable and more productive in their work environment.
- ▶ India is a country today with 65% of its youth in the working age group. If ever there is a way to reap this demographic advantage, it has to be through skill development of the youth so that they add not only to their personal growth, but to the country's economic growth as well.
- ▶ CSC Skill courses help a person focus on practical delivery of work and help him enhance his technical expertise so that he is ready for day one of his job and companies don't have to invest into training him for his job profile.
