MOLECULAR BIOLOGY

Detection of COVID-19 by Real Time PCR
ICMR Registration Number: OKDRCJR

RESULT : NEGATIVE

Principle : Real Time Reverse Transcriptase PCR
Instrument : Elite ingenious (CE-IVD Approved)
Kit : SARS-CoV-2 by Real Time PCR Version-3.2 (CE-IVD Approved)

INTERPRETATION:

Note:- The results relate only to the specimen tested and should be correlated with clinical findings

Interpretation Guidance:-

- * Testing of referred clinical specimens was considered on the basis of request / referral received from / through State Surveillance Officer (SSO) of concerned State Integrated Diseases Surveillance Programme (IDSP) / any other health care facility affirming requirements of the case definitions.
- * A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection.
- * Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimens may be considered after a gap of 2 -4 days after the collection of the first specimen for additional testing if required.
- * A positive alternate pathogen is not necessarily ruled out either, as little is yet known about the role of coinfection.
