

Name - Surinder Kumar

Reg. No - CCA/2021/117820

Course code - CCA 162.

Course Name - DATA Communication

CCA102: DATA Communication

Assignment - 2

Q1 what are the different types of networks?

- Ans Q1 PAN (Personal Area Network)
- ② LAN (Local Area Networks)
- ③ MAN (Metropolitan Area Network)
- ④ WAN (Wide Area Network)

Q2 Explain the shielded twisted pair (STP) and unshielded twisted pair (UTP)?

Ans 2 Shielded Twisted pair cable (STP) has the individual pairs of wires wrapped in foil, which are then wrapped again for double protection.

Unshielded Twisted pair cable (UTP) has each pair of wires twisted together. Those wires are then wrapped in tubing without any other protection.

Q3 What is difference b/w baseband and broadband transmission?

| Ans | Baseband Trans. | Broadband Trans. |
|-----|--|---|
| ① | Digital Signalling. | Analog signalling. |
| ② | Frequency division multiplexing is not possible. | Transmission of data is bidirectional. |
| ③ | E.g; Ethernet is using baseband for LAN. | e.g; used to transmit cable TV to premises. |

Q4

What is the difference b/w a hub, modem router and a switch?

Ans

Hub: A hub transmits data from one device to another in form of binary bits.

Modem: Modem are used to connect to the internet while hubs are used in Local Area Networks. If modem is used as an interface b/w a digital and analog network.

Router: A router transmits data from one network to another in forms of packets.

Switch: A switch transmits data from one device to any another in forms of frames.

Q5

When you move the NIC cards from one PC to another PC, does the MAC address get transferred as well?

Ans

Yes that's because MAC addresses are hardwired into the NIC circuitry, not the PC. This also means that a PC can have a different MAC address when another one replaced the NIC card.

Q6

When trouble shooting computer network problems. What common hardware-related problems can occur?

Ans

A large percentage of a network is made up of hardware problems in these cases can range from malfunctioning

hard drives, broken NICs, and hardware startups.

Q7 In a network that contains two servers & twenty workstations, where is the best place to install an Antivirus programs?

Ans The best solution is to install antivirus on all the computers in the network.

Q8 Define static IP and Dynamic IP? Discuss the difference b/w IPV4 & IPV6?

Ans When a device is assigned a static IP address, the address does not change. Most devices use dynamic IP address, which are assigned by the network when they connect & change over time. The main difference b/w IPV4 & IPV6 is the address size of IP address, the IPV4 is a 32-bit address, whereas IPV6 is a 128-bit hexadecimal address space, & it contains a simple header as compared to IPV4.

Q9 Discuss TCP/IP model in detail?

Ans It stands for transmission control protocol / internet protocol. The TCP/IP model is a concise version of the OSI model.

It contains four layers, unlike seven layers in the OSI model.

Q10 What is a Web Browser? Give some examples of browsers?

Q1

A web browser or simply browser is any application used to access & websites. Common web browsers include Microsoft Edge, Google Chrome, Apple Safari, Internet Explorer, Opera & Mozilla Firefox.

Q2

What is a search engine? Give example
A search engine is a web-based tool that enables user to locate information on the world wide web. Popular e.g. of search engines are google, MSN search and MSN search.

Q3

What is the Internet & www? what are the uses of internet in our daily life?

Ans

The world wide web, or web for short are the pages you see when you're at a device & you're online. But the internet is the network of connected computers that the web works on, as well as what emails & files travel across. Think of the internet as the roads that connect towns & cities together. The internet is very much useful in our daily routine tasks. e.g; it helps us to see our notification and emails. Apart from this, people can use the internet for money transfers, bill pay, online shopping, online order food etc.

Q13 What is an internet service provider?

Ans Give some examples of ISP in India?

An An internet service provider is an organization that provides services for accessing using or participating in the Internet. Internet service providers can be organized in various forms such as commercial, community-owned, non-profit or otherwise privately owned.

The examples of some internet service providers are Hathway, BSNL, TATA tele services, Verizon, Reliance, Jio, Airtel Fibernet and many more working in India as well as worldwide. Internet service providers or ISP are responsible for providing services for using the internet.

Q14 Discuss the difference b/w MAC

address, IP address & Port Address?

Ans MAC address stands for Media Access control address. IP address stands for internet protocol Address. MAC address ensure that physical address of the computer is unique. IP address is a logical address of the computer and is used to uniquely locate computer connected via a network.

Q15 How do we view my internet browser's history?

Ans In the lower-left corner of the browser window tap & hold the back arrow.

| | |
|-----------|-------|
| Page No.: | (6) |
| Date: | YOUVA |

The page that opens contains your browser's history.
