PRINTER

What is printer:

A printer is a peripheral device that produces text or graphics on paper. It's commonly used to generate hard copies of digital documents, such as text documents, images, spreadsheets, or presentations. Printers come in various types, including inkjet, laser, and dot matrix printers, each with its own technology and use cases. Inkjet printers spray tiny droplets of ink onto paper to form characters or images, while laser printers use a laser beam to transfer toner onto the paper, which is then fused using heat. Dot matrix printers use a matrix of pins to strike an inked ribbon, creating dots on the paper to form characters or images. Printers can be connected to computers via USB, Wi-Fi, or network connections, and they play a crucial role in both personal and professional settings for producing physical copies of digital content.

TYPES OF PRINTER:

1. Inkjet Printer
2. Laser printer
3. Solid ink printer
4. Continuous ink printer
5. LED Printers
6. Dot matrix printer
7. A3 printer
