WhatsApp is a popular instant messaging app that allows users to send text messages, voice notes, images, videos, and make voice and video calls over the internet. One of its useful features is **voice messaging**, which works like voicemail. Instead of typing, users can press the microphone icon to record and send a voice message instantly. This is especially helpful for longer or more personal messages and when typing isn't convenient. Unlike traditional voicemail, WhatsApp voice messages are sent directly in chats and can be played, paused, or replayed anytime, making communication more flexible and expressive.
