# Ans – 1 - The four fundamental parts of computers are –

- 1. **Input Device** Input devices like your keyboard, mouse, trackball and touch pad feed information and instructions to the applications running on your computer.
- 2. **Output device** Output devices are needed to temporarily or permanently display, broadcast or record the work done by your computer.
- 3. **CPU** The central processing unit receives instructions from various computer programs in use and executes them as needed.
- Storage A storage device is any type of computing hardware that is used for storing, porting or extracting data files and objects. Storage devices can hold and store information both temporarily and permanently.

# Ans – 2 – Computer based on size and capacity -

## 1. Micro Computers

Micro Computer is a computer who's CPU (Central Processing Unit) is a microprocessor. All the components of a microprocessor are on a single integrated circuit chip. Micro computer can be categorized as the desktop, programmable and workstation.

# 2. Mini Computers

Minicomputers were introduced in early 1960s. They were faster than microcomputers. Basically these computers were mainly multi-user systems, where many users work on the systems. Generally these types of computers had larger memories and greater storage capacity.

# 3. Mainframe Computers

Mainframe computers are large and expensive machines. Generally they handle huge volumes of information and data. In terms of speed, they are having significant processing capacity. Basically used to make server.

# 4. Super Computers

Super Computers are the fastest computer in current era. Basically used for scientific research or large calculations. These are very expensive computers.

#### Ans – 3 – Means of computer generations:

Generation of computers means change in technology is being used in computers. Following Technology used in these computers.

| Generation                 | Used technology         |
|----------------------------|-------------------------|
| 1 <sup>st</sup> generation | Vacuum tubes            |
| 2 <sup>nd</sup> Generation | Transistor              |
| 3 <sup>rd</sup> generation | Integrated circuit      |
| 4 <sup>th</sup> generation | Microprocessor          |
| 5 <sup>th</sup> Generation | Artificial intelligence |

# Ans – 4 – Difference between volatile and non-volatile memory –

#### Volatile Memory:

It is the memory hardware that fetches/stores data at a high-speed. It is also referred as temporary memory. The data within the volatile memory is stored till the system is capable of, but once the system is turned off the data within the volatile memory is deleted automatically. RAM (Random Access Memory) is common examples of volatile memory.

#### Non-Volatile Memory:

It is the type of memory in which data or information is not lost within the memory even power is shut-down. ROM (Read Only Memory) is the most common example of non-volatile memory.

| System Software              | Application Software         | Open Source Software      |
|------------------------------|------------------------------|---------------------------|
| System Software is the type  | Application Software is the  | Open source software is   |
| of software which is the     | type of software that runs   | a computer software       |
| interface between            | as per user request. It runs | whose source code is      |
| application software and     | on the platform which is     | available openly in       |
| system. Low level languages  | provided by system           | internet and              |
| are used to write the system | software. High level         | programmers can           |
| software. An important thing | languages are used to        | modify it to add new      |
| is that without system       | write the application        | features and capabilities |
| software, system can not     | software. Its a specific     | without any cost.         |
| run.                         | purpose software.            |                           |

#### Ans - 5 - difference amount system, application and open source software -

#### Ans – 6 – MS word Formatting –

# I am Manisha shah from Pauri Garhwal Uttarakhand. I have

completed senior secondary and at present I am a student of B.A 1<sup>st</sup> Year. My father name is Mr. Ram singh and he is doing private job. My mother is housewife. I like to play badminton and to watch TV programs. "Need to get IMS's Address".

# Ans – 7 – MS Word

MS word is a widely used commercial word processor developed by Microsoft. MS word is application software, which is capable of

- creating
- editing
- saving, and
- printing any type of document

Ans - 8 - Equations -<u>Equations</u>  $X_{2} + Y_{5} = 30$   $Z^{3} + Q^{4} = 50$  $A_{2} + B^{8} = X_{2} + Y^{8}$ 

Ans – 9 – Text to Table Select the text you want to convert Select the **insert** tab Click on **table** command. A Dialog box will appears Click on **Convert text to table, a new** dialog box appears Here set number of columns Click on OK finally. Select text Convert in a table.

| Select the text you want to convert         | Select the <b>insert</b> tab                 |
|---|--|
| Click on <b>table</b> command. A Dialog box | Click on <b>Convert text to table, a new</b> |
| will appears                                | dialog box appears                           |
| Here set number of columns                  | Click on OK finally. Select text Convert     |
|   | in a table.                                  |

Ans 10 – Insert a table into word –

- 1- Click on Insert tab then click on table command.
- 2- A dialog box will appear –

#### 3- Set here number of columns and rows (as per your requirement)

4- Then Click Ok

| TT DOORT |  |  |
|----------|--|--|
| Roll No  | Name   | Marks  |
| 1        | n1   | 60   |
| 2        | n2   | 70   |

| 14 |         | Highest | 90    |   |   |   |
| 15 |         | Lowest  | 40    |   |   |   |

#### Ans 13- A) Description about steps involving for followings –

- i) Modify column width Select columns  $\rightarrow$  On the home tab click on FORMAT option  $\rightarrow$  Type width as per your requirement  $\rightarrow$  OK
  - ii) Modify Row height Select Rows  $\rightarrow$  On the home tab click on FORMAT option  $\rightarrow$  Type height as per your requirement  $\rightarrow$  OK
  - iii) Delete rows and columns -Select rows and columns  $\rightarrow$  on the home tab click on Delete option

#### Ans 13- B) Description

- Absolute and relative cell reference –
  Relative references change while a formula is copied to another place while absolute reference remains constant, no matter where they are copied.
- ii) Cell address –

A cell reference refers to cells on a worksheet and can be used in formula.

#### Ans -14- a) Tools available in Power-point customization –

Shapes, Tables, Charts, Audio, Video, Animations, Transitions, slide design and many other tools are available to customization power-point presentation.

#### Ans -14 – b) Steps for the following actions in power-point –

| Presentation1 - Microsoft PowerPoint (Product Activation Failed)  | Presentation1 - Microsoft PowerPoint (Product Activation Failed)   |

## Ans -15 – Steps for following in power point –

#### **SLIDE SHOW EFFECT**

Animations are used to set motion on images and text within a slide

Transition used for set motion effect on slide

# PART 2

### Ans 16- Difference between machine langulage and high level language –

Machine language considered a machine friendly language and it is not portable while high level language considered as a programmer friendly language and it require to complier or interpreter to be translate into machine language. It can be ported from one computer to another.

## Ans 17- Different Data Types in C programming –

**1. Integer –** We use these for storing various whole numbers, such as 5, 8, 67, 2390, etc.

**2. Character** – It refers to all ASCII character sets as well as the single alphabets, such as 'x', 'Y', etc.

**3. Double –** These include all large types of numeric values that do not come under either floating-point data type or integer data type.

**4. Floating-point** – These refer to all the real number values or decimal points, such as 40.1, 820.673, 5.9, etc.

**5. Void** – This term refers to no values at all. We mostly use this data type when defining the functions in a program.
