Devices of a Computer

A computer uses various devices to perform its functions. These devices are generally grouped into three main types: **input devices**, **output devices**, and **storage devices**.

1. Input Devices

Input devices are used to enter data into the computer. Common examples include:

- **Keyboard** used for typing text and commands.
- Mouse used to point, click, and select items on the screen.
- **Scanner** converts physical documents into digital format.
- **Microphone** captures sound input.
- **Webcam** captures video input.

2. Output Devices

Output devices display or provide the results of the computer's processes. These include:

- **Monitor** displays visual output (text, images, videos).
- **Printer** produces a physical copy of digital documents.
- **Speakers** output sound.
- **Projector** enlarges and displays screen content on a wall or screen.

3. Storage Devices

These devices store data and programs.

- **Hard Drive (HDD/SSD)** stores data permanently.
- **USB Flash Drive** portable storage device.
- **CD/DVD** optical discs used for media storage.
- **Memory Card** small device used in phones, cameras, and tablets.
