

ASSIGNMENT ON INTERNET

ON

MOBILE PHONE

Q.1. How can someone get internet on mobile phone?

Ans: To access internet on our mobile phone we need;

- ①. A mobile phone that supports internet access.
- ②. A mobile phone service that supports data transmission.
- ③. An account from our mobile service provider with the data setting for accessing internet on phone.

Generation of the network

*. G in 2G, 3G, and 4G stands for the "Generation" of the network. A higher number before the 'G' means more power to send out and receive more information and therefore the ability to achieve a higher efficiency through the wireless network. 2G networks are based on narrow band digital networks. Signals are transmitted in the digital format and this dramatically improves the quality of calls and also reduces the complexity of data transmission.

*. The 3rd generation of mobile networks has become popular and it has made the user to access the internet over devices like mobiles and tablets. The speed of data transmission on a 3G network ranges between 384 kbps to 2 mbps.

*. 3G network actually allows for more data transmission and therefore the network enables voice and video calling, file transmission, internet surfing, online TV, view high definition videos, play games and much more.

- * 4G mobile networks provide many value added features. In addition to all the 3G facilities, 4G is the best option for users who need to always stay connected to internet.

HOW TO SET UP INTERNET IN MOBILE PHONE

- * Step to use internet in keypad based phones:
 - Select Menu > internet, to open the Home page, either select Home.
 - To enter a web address, select go to address, enter the address, and select OK.
 - To search the web - enter the search terms, and select Search. After you connect to the service, you can start browsing its pages

TO SEE WIFI SETTINGS:

- Go to Settings • wi-fi
- Choose the connection you want to connect with
- Enter password if required.

STEPS FOR CONNECTING TO INTERNET

- Navigate to the Settings menu of your Android/ Smartphone/ Tablet.
- In the setting menu you need to find the wireless and networks settings. On most devices, click the 'more' or 'more settings' button, whichever is available.
- Once you have found the wireless and network setting, you can connect via two options (1) mobile internet (2) wi-fi

- To connect to the internet via your mobile phone, you can both pull down the notifications bar, and select mobile data option or you can go to the 'More setting' option in wireless and network option.

- Click on the mobile networks button. There, you will have to check the 'mobile data' checkbox. Once it has been checked, your phone will start receiving mobile internet.
