

How to Change Desktop Wallpaper

◆ Method 1: From Settings

1. **Right-click on the Desktop** and select “**Personalize**”.
2. You'll be taken to the **Background** settings.
3. Under the **Background** section:
 - Choose **Picture**, **Solid color**, or **Slideshow** from the dropdown.
4. To change your wallpaper:
 - If you select **Picture**, click **Browse** to choose an image from your computer.
 - If you select **Slideshow**, pick a folder with multiple images to rotate automatically.
5. Once selected, the background will change immediately.

◆ Method 2: Direct from File Explorer

1. Open **File Explorer** and find the image you want as your wallpaper.
 2. **Right-click the image** and choose “**Set as desktop background**”.
-

How to Change Screen Saver

1. **Right-click on the Desktop** and choose “**Personalize**”.
 2. In the **Personalization** window, scroll down and click “**Lock screen**” (left panel).
 3. Scroll down and click on “**Screen saver settings**” (usually near the bottom).
 4. In the **Screen Saver Settings** window:
 - Choose a screen saver from the drop-down list (e.g., **Blank**, **Bubbles**, **Photos**, etc.).
 - You can click “**Settings...**” (if available) to customize further (e.g., photo folder for the Photos screen saver).
 - Set the **wait time** (how long the computer stays idle before the screen saver starts).
 - Check “**On resume, display logon screen**” if you want to require a password when returning.
 5. Click **Apply**, then **OK**.
-

Tips:

- **High-resolution images** look better as wallpapers.
- You can download screen savers or wallpapers online if you want more options.
- On **Windows 11**, screen savers are not as prominently featured but still available through the same method.
