

UNIT II: INTRODUCTION TO MICROSOFT WORD

MICROSOFT OFFICE

Microsoft Office is a suite of desktop productivity applications that is designed specifically to be used for office or business use. It is a proprietary product of Microsoft Corporation and was first released in 1990. Microsoft Office is available in 35 different languages and is supported by Windows, Mac and most Linux variants. It mainly consists of Word, Excel, PowerPoint, Access, OneNote, Outlook and Publisher applications.

Microsoft Office was primarily created to automate the manual office work with a collection of purpose-built applications. Each of the applications in Microsoft Office serves as specific knowledge or office domain such as:

1. Microsoft Word: Helps users in creating text documents.
2. Microsoft Excel: Creates simple to complex data/numerical spreadsheets.
3. Microsoft PowerPoint: Stand-alone application for creating professional multimedia presentations.
4. Microsoft Access: Database management application.
5. Microsoft Publisher: Introductory application for creating and publishing marketing materials.
6. Microsoft OneNote: Alternate to a paper notebook, it enables an user to neatly organize their notes.

Besides desktop applications, Microsoft Office is available to use online or from cloud under a lighter (Office Web Apps) and full (Office 365) version.

MICROSOFT WORD

Microsoft Word is a widely used commercial word processor developed by Microsoft. A Word processor is application software, which is capable of creating, editing, saving, and printing documents. A word processor should never be confused with a text editor, such as the Notepad,

which only allows us to create and edit plain text. Whereas, using a word processor, you can create mixed text documents having various graphics including pictures, charts, and diagrams and make changes.

It was initially launched in 1983 and has since been revised numerous times. Microsoft Word is available for both Windows and Macintosh operating systems. Microsoft Word is often called simply Word or MS Word.

The default file format was .doc prior to the Microsoft Word 2007 version; in 2007, .docx became the default file format. In this we have to explore the concept of MS Word using MS word 2007.

IMPORTANT FEATURES OF WORD PROCESSOR

Word processor offers several features to ease document creation and editing, including:

Ease and Speed: A Word processor provides an easier and faster method to type the text.

Editing Features: Using a Word processor, you can apply editing operations to the text, such as, copying, moving, and deleting.

Formatting Features: It provides various formatting features, such as, Boldface, Italics, Underlining, Font Name, Font Color and WordArt, etc.

Graphic Features: You can add pictures, drawings, and charts, etc., to your documents. This enhances the overall presentation of a document.

Printing Features: You can easily take printouts of your documents. Most Word Processors have the feature of WYSIWYG (What You See Is What You Get), i.e., a document on your screen will look exactly similar to its printed version.

Spell Check Feature: A Word processor helps in keeping your document error free, as it has spell check feature, which not only corrects the misspelt words, but also suggests the possible synonyms. It is also capable of rectifying grammatical errors.

Mail Merge feature: This feature allows you to send a piece of text to multiple addresses. For

example, if you want to send your birthday invitation to 100 friends, the Mail Merge feature will keep the same invitation text for all, and will change only the name and address on invited guests. Hence, this feature saves a lot of time and effort.

OLE Feature: The Object Linking and Embedding feature allows a Word Processor to interact with other programs by embedding objects in a document. For example, if you have linked an equation written in the spreadsheet software to some charts in a Word processor, and if you change the equation values, the charts will change automatically, because an object of the equation is present with the Word processor also.

Getting Familiar with Microsoft Word for Windows

This section will introduce you to the Word window. You use this window to interact with Word. To begin this lesson, open Microsoft Word 2007. The Microsoft Word window appears and your screen looks similar to the one shown here.

Note: Your screen will probably not look exactly like the screen shown. In Word 2007, how a window displays depends on the size of your window, the size of your monitor, and the resolution to which your monitor is set. Resolution determines how much information your computer monitor can display.

The Microsoft Office Button

In the upper-left corner of the Word window is the Microsoft Office button. When you click the button, a menu appears. You can use the menu to create a new file, open an existing file, save a file, and perform many other tasks.

The Quick Access Toolbar

Next to the Microsoft Office button is the Quick Access toolbar. The Quick Access toolbar provides you with access to commands you frequently use. By default Save, Undo, and Redo appear on the Quick Access toolbar. You can use Save to save your file, Undo to rollback an action you have taken, and Redo to reapply an action you have rolled back.

The Title Bar

Next to the Quick Access toolbar is the Title bar. The Title bar displays the title of the document on which you are currently working. Word names the first new document you open Document1. As you open additional new documents, Word names them sequentially. When you save your document, you assign the document a new name.

The Ribbon

You use commands to tell Microsoft Word what to do. In Microsoft Word 2007, you use the Ribbon to issue commands. The Ribbon is located near the top of the screen, below the Quick Access toolbar. At the top of the Ribbon are several tabs; clicking a tab displays several related command groups. Within each group are related command buttons. You click buttons to issue commands or to access menus and dialog boxes. You may also find a dialog box launcher in the bottom-right corner of a group. Clicking the dialog box launcher gives you access to additional commands via a dialog box.

The Ruler

The ruler is found below the Ribbon.

You can use the ruler to change the format of your document quickly. If your ruler is not visible, follow the steps listed here:

1. Click the View tab to choose it.
2. Click the check box next to Ruler in the Show/Hide group. The ruler appears below the Ribbon.

The Text Area

Just below the ruler is a large area called the text area. You type your document in the text area. The blinking vertical line in the upper-left corner of the text area is the cursor. It marks the insertion point. As you type, your text displays at the cursor location. The horizontal line next to the cursor marks the end of the document.

The Vertical and Horizontal and Vertical Scroll Bars

The vertical and horizontal scroll bars enable you to move up, down, and across your window simply by dragging the icon located on the scroll bar.

The Status Bar

The Status bar appears at the very bottom of your window and provides such information as the current page and the number of words in your document. You can change what displays on the Status bar by right-clicking on the Status bar and selecting the options you want from the Customize Status Bar menu. You click a menu item to select it. You click it again to deselect it. A check mark next to an item means it is selected.

The Home Tab

The home tab the basic formatting tools found in Word 2007. You will find five sections, Clipboard, Font, Paragraph, Styles and Editing. Clicking the down arrow beside any of the icons here will drop down more options for that tool. Each section also contains an arrow in the bottom right corner which will open a window containing the options found in that section.

Clipboard

The Clipboard allows you to cut, copy, paste and copy formatting from one place to another.

Font

The font section of the ribbon provides a section to handle the basic text formatting. Items such as bold, underline, strikethrough, highlight and font type can be changed here.

Some items from this section and some items from the paragraph section are also available by highlighting text and moving your cursor slightly above the highlighted text. This saves having to move your cursor all the way to the top of the

screen for some common formatting items.

Paragraph

The paragraph section provides icons for bullets, lists, justify, line spacing, indents and borders.

Styles

The styles section allows you to quickly change the formatting of a section of text by choosing one of the predefined styles.

You can also create a new style based on the formatting of your selected text for use later in other sections of your document.

Editing

The Editing section of the toolbar allows you to find, replace and select items.

The select option gives you the ability to select all, select objects or select text with similar formatting. This last option gives you the ability to quickly change everything in your document with one style to another style without having to manually find all of that text and change each area separately.

Understanding Nonprinting Characters

Certain characters, called nonprinting characters, do not print and will not appear in your printed document but do affect your document layout. You can elect to see these characters on the screen as you type or you can elect to have them remain invisible. For these lessons, opt to see them onscreen. This table describes most of them:

Character Denotes

A tab

. A space

¶ The end of a paragraph

Hidden text

To view nonprinting characters:

1. Choose the Home tab.
2. Click the Show/Hide button in the Paragraph group . The Show/Hide button appears in a contrasting color, when it is selected.

Create Sample Data and Select Text

If you type =rand() in your Word document and then press Enter, Word creates three paragraphs.

You can use these paragraphs to practice what you learn.

Text Basics

In this section, you'll learn the basics of working with text, including how to insert, delete, select, copy, paste, and drag and drop text.

To insert text:

- ☐ Move your mouse to the location where you want text to appear in the document.
- ☐ Left-click the mouse. The insertion point appears.
- ☐ Type the text you want to appear.

To delete text:

- ☐ Place your cursor next to the text you want to delete.
- ☐ Press the Backspace key on your keyboard to delete text to the left of the cursor.
- ☐ Press the Delete key on your keyboard to delete text to the right of the cursor.

To select text:

- ☐ Place the insertion point next to the text you want to select.
- ☐ Left-click your mouse. While holding it down, drag your mouse over the text to select it.
- ☐ Release the mouse button. You have selected the text. A highlighted box will appear over the selected text.

When you select text or images in Word, a hover toolbar with formatting options appears. This makes formatting commands easily accessible, which can save you time.

To copy and paste text:

- ☒ Select the text you want to copy.
- ☒ Click the Copy command on the Home tab.
- ☒ Place the insertion point where you want text to appear.
- ☒ Click the Paste command on the Home tab. The text will appear.

To drag and drop text:

- ☒ Select the text you want to copy.
- ☒ Left-click your mouse, and drag the text to the location where you want it to appear. The cursor will have a text box underneath it to indicate that you are moving text.
- ☒ Release the mouse button, and the text will appear.

If text does not appear in the exact location you want, you can click the Enter key on your keyboard to move the text to a new line.

Creating a New Document

Each time when you open Word, a new blank document appears; however, you will also need to know how to create new documents while an existing document is open. In this section, you will learn how to create new documents.

To create a new blank document:

- ☒ Click the Microsoft Office button.
- ☒ Select New. The New Document dialog box appears.
- ☒ Select Blank document under the Blank and recent section. It will be highlighted by default.
- ☒ Click Create. A new blank document appears in the Word window.

Saving Documents

In this section, you will learn how to use the Save and Save As commands, how to save as a Word 97-2003 compatible document, and how to save as a PDF.

To use the Save As command:

- ☒ Click the Microsoft Office button.
- ☒ Select Save As Word Document. The Save As dialog box appears.
- ☒ Select the location where you want to save the document using the drop-down menu.
- ☒ Enter a name for the document.
- ☒ Click the Save button.

To use the Save command:

- ☒ Click the Microsoft Office button.
- ☒ Select Save from the menu.

Using the Save command saves the document in its current location using the same file name. If you are saving for the first time and select Save, the Save As dialog box will appear.

To Save As a Word 97 - 2003 document:

- ☒ Click the Microsoft Office button.
- ☒ Select Save As Word 97-2003 Document.
- ☒ Select the location where you want to save the document using the drop-down menu.
- ☒ Enter a name for the document.
- ☒ Click the Save button.

To download the PDF extension:

- ☒ Click the Microsoft Office button.
- ☒ Select Save As Find add-ins for other file formats. This will open your web

browser to the Microsoft site.

☒ Follow the instructions on the Microsoft site for downloading the extension.

To save as a PDF:

☒ Click the Microsoft Office button.

☒ Select Save As PDF. The Save As dialog box will appear.

☒ Select the location where you want to save the document using the drop-down menu.

☒ Enter a name for the document.

☒ Click the Publish button.

Compatibility mode

Sometimes you may need to work with documents that were created in earlier versions of Microsoft Word, such as Word 2003 or Word 2000. When you open these types of documents, they will appear in Compatibility mode.

Compatibility mode disables certain features, so you'll only be able to access commands found in the program that was used to create the document. For example, if you open a document created in Word 2003, you can only use tabs and commands found in Word 2003.

If you want access to all of the Word 2007 features, you can save the document in the Word 2007 file format.

To exit Compatibility mode:

☒ Click the Microsoft Office button.

☒ Select Save As Word Document.

Formatting Text

In this section, you will learn to format the font size, style, and color of text, as well as how to use the Bold, Italic, Underline, and Change Case commands.

To format font size:

☒ Select the text you want to modify.

☒ Left-click the drop-down arrow next to the font size box on the Home tab. The font size drop-down menu appears.

☒ Move your cursor over the various font sizes. A live preview of the font size will appear in the document.

☒ Left-click the font size you want to use. The font size will change in the document.

To format font style:

☒ Select the text you want to modify.

☒ Left-click the drop-down arrow next to the font style box on the Home tab. The font style drop-down menu appears.

☒ Move your cursor over the various font styles. A live preview of the font will appear in the document.

☒ Left-click the font style you want to use. The font style will change in the document.

To format font color:

☒ Select the text you want to modify.

☒ Left-click the drop-down arrow next to the font color box on the Home tab. The font color menu appears.

☒ Move your cursor over the various font colors. A live preview of the color will appear in the document.

☒ Left-click the font color you want to use. The font color will change in the document.

Your color choices aren't limited to the drop-down menu that appears. Select More Colors at the bottom of the list to access the Colors dialog box. Choose the color you want, then click OK.

To use the Bold, Italic, and Underline commands:

☒ Select the text you want to modify.

☒ Click the Bold, Italic, or Underline command in the Font group on the Home tab.

To change the text case:

☒ Select the text you want to modify.

☒ Click the Change Case command in the Font group on the Home tab.

☒ Select one of the case options from the list.

To change text alignment:

☒ Select the text you want to modify.

☒ Select one of the four alignment options from the Paragraph group on the Home tab.

o Align Text Left: Aligns all of the selected text to the left margin

o Center: Aligns text an equal distance from the left and right margins

o Align Text Right: Aligns all of the selected text to the right margin

o Justify: Aligns text equally to the right and left margins; used in many books, newsletters, and newspapers

Replacing text

☒ Open any word document.

☒ Click Edit menu and then click Replace option. You will get the dialog box as shown below and type the word with which you want to replace.

☒ Click ReplaceAll button once. You get the below dialog box.

Click OK button and then click X to close Find and Replace dialog box.

Working with Lists

In this section, you will learn how to modify existing bullets, insert new bulleted and numbered

lists, and select symbols as bullets.

To insert a new list:

☒ Select the text you want to format as a list.

☒ Click the Bullets or Numbering commands on the Home tab.

☒ Left-click the bullet or numbering style you want to use. It will appear in the document.

☒ Position your cursor at the end of a list item, and press the Enter key to add an item to the list.

To remove numbers or bullets from a list, select the list and click the Bullets or Numbering commands.

To select an alternate bullet or numbering style:

☒ Select all of the text in an existing list.

☒ Click the Bullets or Numbering commands on the Home tab.

☒ Left-click to select an alternate bullet or numbering style.

To use a symbol as a bullet:

☒ Select an existing list.

☒ Click the Bullets command.

☒ Select Define New Bullet from the list. The Define New Bullet dialog box appears.

☒ Click the Symbol button. The Symbol dialog box appears.

☒ Click the Font: drop-down box, and select a font category.

☒ Left-click a symbol to select it.

☒ Click OK. The symbol will now appear in the Preview section of the Define New Bullet dialog box.

☒ Click OK to apply the symbol to the list in the document.

You can use a picture as a bullet. Click the Picture button in the Define New Bullet dialog box, then locate the image file on your computer.

Proofing Features

Word provides you with several proofing features that will help you produce professional, errorfree documents. In this section, you will learn about the various proofing features, including the

Spelling & Grammar tool.

By default, Word automatically checks your document for spelling and grammar errors. These errors are indicated by colored wavy lines.

▣ The blue line indicates a contextual spelling error.

o A contextual spelling error is when an incorrect spelling of a word is chosen. For example, if you write Deer Mr. Theodore at the beginning of a letter, deer is a contextual spelling error because dear should have been used. Deer is spelled correctly, but it is used incorrectly in this letter.

▣ The red line indicates a misspelled word.

▣ The green line indicates a grammatical error.

To use the spelling check feature:

▣ Right-click the underlined word. A menu will appear.

▣ Select the correct spelling of the word from the listed suggestions.

▣ Left-click your mouse on the word. It will appear in the document.

You can choose to ignore an underlined word, add it to the dictionary, or go to the Spelling dialog box.

To use the grammar check feature:

▣ Right-click the underlined word. A menu will appear.

▣ Select the correct word from the listed suggestions.

▣ Left-click your mouse on the word. It will appear in the document.

You can also choose to ignore an underlined word, go to the Grammar dialog box, or find

out more information about the word and its usage.

You can also wait and run the spelling and grammar check after completing the document.

Click the Spelling & Grammar command on the Review tab.

Line and Paragraph Spacing

In this section, you will learn how to modify line and paragraph spacing in various ways.

To format line spacing:

- ☒ Select the text you want to format.
- ☒ Click the Line spacing command in the Paragraph group on the Home tab.
- ☒ Select a spacing option.

OR

- ☒ Select Line Spacing Options. The Paragraph dialog box appears.
- ☒ Use the Line spacing drop-down menu to select a spacing option.
- ☒ Modify the before and after points to adjust line spacing as needed.
- ☒ Click OK.

Paragraph spacing

Just as you can format spacing between lines in your document, you can choose spacing options between each paragraph. Typically, extra spaces are added between paragraphs, headings, or subheadings. Extra spacing between paragraphs adds emphasis and makes a document easier to read.

To format paragraph spacing:

- ☒ Click the Line spacing command on the Home tab.
- ☒ Select Add Space Before Paragraph or Remove Space After Paragraph from the menu. If you don't see the option you want, click Line Spacing Options to manually set the spacing (see below).

OR

☒ Select Line Spacing Options. The Paragraph dialog box appears.

☒ Change the Before and After points in the Paragraph section.

☒ Click OK.

Modifying Page Layout

In this section, you will learn how to change the page orientation, paper size, and page margins, as well as how to insert a break.

To change page orientation:

☒ Select the Page Layout tab.

☒ Click the Orientation command in the Page Setup group.

☒ Left-click either Portrait or Landscape to change the page orientation.

Landscape format means everything on the page is oriented horizontally, while portrait format means everything is oriented vertically.

To change the paper size:

☒ Select the Page Layout tab.

☒ Left-click the Size command, and a drop-down menu will appear. The current paper size is highlighted.

☒ Left-click a size option to select it. The page size of the document changes.

To format page margins:

☒ Select the Page Layout tab.

☒ Click the Margins command. A menu of options appears. Normal is selected by default.

☒ Left-click the predefined margin size you want.

OR

☒ Select Custom Margins from the menu. The Page Setup dialog box appears.

☒ Enter the desired margin size in the appropriate fields.

You can always access the Page Setup dialog box by clicking the small arrow in the bottomright corner of the Page Setup group. The dialog box should look familiar to people who have used previous versions of Word.

To insert a break:

- ☑ Place your insertion point where you want the break to appear.
- ☑ Select the Page Layout tab.
- ☑ Click the Breaks command. A menu appears.
- ☑ Left-click a break option to select it. The break will appear in the document.

Why would you need to use a break? Each type of break serves a different purpose and will affect the document in different ways. Page breaks move text to a new page before reaching the end of a page, while section breaks create a barrier between parts of the document for formatting purposes. Column breaks split text in columns at a specific point. Practice using the various break styles to see how they affect the document.

Working with Pictures

In this section, you will learn how to insert a picture from your computer, change the picture style and shape, add a border, and crop and compress pictures.

To insert a picture:

- ☑ Place your insertion point where you want the image to appear.
- ☑ Select the Insert tab.
- ☑ Click the Picture command in the Illustrations group. The Insert Picture dialog box appears.
- ☑ Select the image file on your computer.
- ☑ Click Insert, and it will appear in your document.

Left-click a corner sizing handle, and while holding down the mouse button resize the image.

The image retains its proportions.

To wrap text around an image:

☒ Select the image.

☒ Select the Picture Tools Format tab.

☒ Click the Text Wrapping command in the Arrange group.

☒ Left-click a menu option to select it. In this example, we selected Tight.

☒ Move the image around to see how the text wraps for each setting.

☒ The Position button has predefined text wrapping settings. The Position button is located to the left of the Text Wrapping button.

☒ Click the Position button, and a drop-down list of text wrapping options will appear. Hover over an option to see what it does.

If you can't get your text to wrap the way you want, click the Text Wrapping command and select More Layout Options from the menu. You can make more precise changes in the Advanced Layout dialog box that appears.

To crop an image:

☒ Select the image.

☒ Select the Format tab.

☒ Click the Crop command. The black cropping handles appear.

☒ Left-click and move a handle to crop an image.

☒ Click the Crop command to deselect the crop tool.

Corner handles will crop the image proportionally.

To compress a picture:

☒ Select the picture.

☒ Select the Format tab.

☒ Click the Compress Pictures command in the Adjust group. A dialog box appears.

☒ Click the Options button to access the Compression Setting dialog box.

☒ Choose the target output.

☒ Change any of the default picture settings you want.

☒ Click OK in the Compression Settings dialog box.

☒ Click OK in the Compress Pictures dialog box.

You need to monitor the file size of your images and documents that include images, especially if you send them via email. Cropping and resizing an image doesn't decrease the image file size, but compression does.

Other picture tools

There are many other things you can do to modify a picture. From the Format tab, some of the other useful commands include:

☒ Change Picture: Selects a new picture from your computer

☒ Reset Picture: Reverts to original image

☒ Brightness: Adjusts the brightness of an image

☒ Color: Adjusts the contrast of an image from light to dark

☒ Recolor: Modifies the color in a variety of ways, including black and white, sepia, pink, and purple

To change the shape of a picture:

☒ Select the picture.

☒ Select the Format tab.

☒ Click the Picture Shape icon. A menu appears.

☒ Left-click a shape to select it.

To apply a picture style:

☒ Select the picture.

☒ Select the Format tab.

☒ Click the More drop-down arrow to display all of the picture styles.

☒ Hover over a picture style to display a live preview of the style in the document.

☒ Left-click a style to select it.

To add a border to a picture manually:

☒ Select the picture.

☒ Select the Format tab.

☒ Left-click the Picture Border command, and select a color.

OR

☒ Select Weight from the menu and choose a line weight.

Working with Tables

A table is a grid of cells arranged in rows and columns. Tables can be customized and are useful for various tasks such as presenting text information and numerical data.

In this section, you will learn how to convert text to a table, apply table styles, format tables, and create blank tables.

To convert existing text to a table:

☒ Select the text you want to convert.

☒ Select the Insert tab.

☒ Click the Table command.

☒ Select Convert Text to Table from the menu. A dialog box appears.

☒ Choose one of the options in the Separate text at: section. This is how Word knows what text to put in each column.

☒ Click OK. The text appears in a table.

To add a row above an existing row:

☒ Place the insertion point in a row below the location where you want to add a row.

☒ Right-click the mouse. A menu appears.

☒ Select Insert Insert Rows Above.

A new row appears above the insertion point.

You can also add rows below the insertion point. Follow the same steps, but select Insert Rows Below from the menu.

To add a column:

☒ Place the insertion point in a column adjacent to the location where you want the new column to appear.

☒ Right-click the mouse. A menu appears.

☒ Select Insert Columns to the Left or Insert Columns to the Right. A new column appears.

To delete a row or column:

☒ Select the row or column.

☒ Right-click your mouse, and a menu appears.

☒ Select Delete Columns or Delete Rows.

To insert a blank table:

☒ Place your insertion point in the document where you want the table to appear.

☒ Select the Insert tab.

☒ Click the Table command.

☒ Drag your mouse over the diagram squares to select the number of columns and rows in the table.

☒ Left-click your mouse, and the table appears in the document.

☒ Enter text into the table.

Modifying a table using the layout tab

When you select a table, Design and Layout tabs appear under Table Tools on the Ribbon.

Using commands on the Layout tab, you can make a variety of modifications to the table, including:

☒ Adding and deleting columns

☒ Adding and deleting rows

☒ Changing the cell size

☒ Aligning cell text

☒ Changing text direction

☒ Merging and splitting cells

Print Documents

To print your MS Word document:

Click ► File ► Print from the Menu Bar and a Print window will pop up on the screen. Click ► OK for your document to start printing.

As with all commands in MS Word, you can make changes along the way.

From the Print menu, you can alter how many copies will be made, in what order the pages will be and much more.

Another useful tool is the Print Preview function found alongside the Print command. This will allow you to look over an exact copy of what will come out of the printer before actually executing the print command. It is especially useful when experimenting with altered margins and page dimensions, and can help to conserve paper.

Exit from MS Word

When you are finished

Click ► File ► Exit from the
menu bar OR

Click on the X in the top right corner of the computer
screen.

Test your Self

Multiple Choice Questions

1. MS Word is a popular program.

- a. Database c. Presentation
- b. Calculation d. Word Processing

2. is a temporary storage location.

- a. Clipboard c. Ribbon
- b. Office Button d. Tabs

3. Name the feature that automatically shifts the text to the next line if it does not fit in the current line.

- a. Enter c. Word Fit
- b. Word Wrap d. Word Shift

4. Clicking on which button, you can see non-printing marks?

- a. Show/Hide c. Format Painter
- b. Sort d. None of these

5. What is the file extension of Word document?

- a. .docw c. .dow
- b. .docx d. .docu

6. How many types of text formatting do we have in MS Word?

- a. One c. Two
- b. Three d. Four

7. Which type of formatting focuses on the appearance of individual character?

- a. Page c. Paragraph
- b. Character d. All of these

8. Which option in MS Word places the selected text below the baseline?

- a. Superscript c. Script
- b. Subscript d. Down Script

9. Which of the following Options indents all lines other than the first line?
- a. Bar Tab c. Hanging Indent
 - b. Left Tab d. None of these
10. What do you call the distance between the written text and the edge of a paper?
- a. Margin c. Alignment
 - b. Ruler Line d. Indent Stop
11. Which utility in Word allows us to find a word and replace it with another word?
- a. Replace with Find c. Find
 - b. Find and Replace d. Replace
12. Which tab contains the Spelling & Grammar option?
- a. Home c. Page layout
 - b. Review d. All of these
13. Which of the following graphics illustrations can be added in Word documents?
- a. Image Files c. Scanned Files
 - b. Drawing d. All of these
14. On which tab is the Find option located?
- a. Home c. Mailings
 - b. Insert d. View
15. Under which section of the Spelling and Grammar dialog box we can find the possible suggestions for an incorrectly spelt word?
- a. Not in dictionary c. Corrected
 - b. Suggestions d. None of these
16. Which of these formats is an image file extension?
- a. GIF c. BMP
 - b. JPG d. All of these

17. What do we call the reference place that lists the synonyms of a word rather than its definition and pronunciation?

- a. Dictionary c. Both a and b
- b. Thesaurus d. None of these

18. Which of the following refers to dividing the cell(s) further into separate cells?

- a. Merge cells c. Both a and b
- b. Split cells d. None of these

State True or False

1. The Word application opens a new document with the temporary name Document1.()
2. The round button located at the extreme left of the window is known as Save Button.()
3. Ribbon is divided into Four sections. ()
4. Status bar is located at the bottom of the document window.()
5. The Exit Word option is present in the office Button menu.()
6. Rulers Bars help to navigate through different parts of a document.()
7. By default, three buttons are present on the Quick Access Toolbar.()
8. There are six layout buttons on the right end of the Status bar.()
9. There are four categories of Text alignment.()
10. Superscript and Subscript are different forms of Text margins.()
